October 17, 2011

Dear Friends of Education:

Frontier Communications is pleased to partner with the WorldWide Workshop in its expansion of the Globaloria educational network.

At Frontier, we are transforming West Virginia to become one of the nation's most technologically connected states. We are building a leading-edge infrastructure that already is making a difference in our state's ability to compete in an economy that depends on technology. At the same time, our High-Speed Internet network is bringing educational opportunities to schools and families across West Virginia.

Frontier fully supports the World Wide Workshop's highly innovative Globaloria program. We join our state's education leaders in recognizing that technology is critical in helping teachers prepare our young people for rewarding careers and productive community life. West Virginians should not be limited in their pursuit of academic success because they live in a rural and rugged region. Our expanding and strengthening of High-Speed Internet services across the state, coupled with devoted leadership in our schools, are producing new and exciting educational opportunities and success.

Those of us who live and work in West Virginia appreciate the welcoming communities we call home. We know we must work each day to strengthen our communities and prepare our citizens for a future that surely will require well-rounded academic preparation. We join the WorldWide Workshop and West Virginia educators in their mission to prepare our young citizens for a bright future. We are pleased to play a role in that critical effort in *Wild, Wonderful and Wired* West Virginia.

Most sincerely,

A handwritten signature in dark ink that reads "Dana Waldo".
